automated banding systems

Utilising Marden Edwards' expertise and experience in bespoke packaging systems.

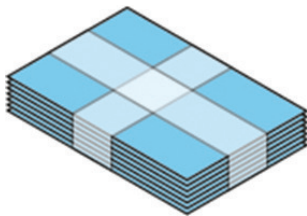

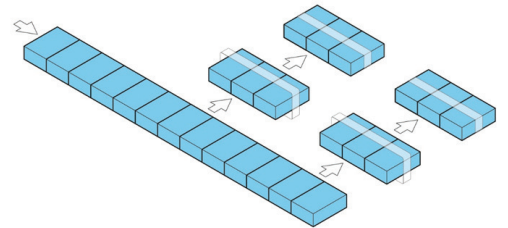

The need for eco-effective packaging systems has come to the forefront for individual and collating packaging.

Marden Edwards responds to this need with a range of automation systems featuring a multitude of banding machine types. The range incorporates diverse product handling and utilises a banding head that can operate with either BOPP or paper material. The band widths can range from 29mm to 150mm. The number of banding heads depend on the running rate of the production line, a single bander can operate in automatic mode at a rate of 20 per minute. In addition to the three core models we offer customer tailored solutions to suit all our client needs.

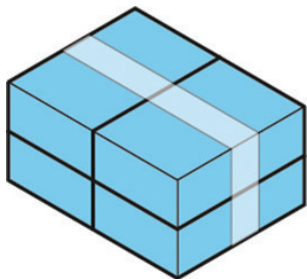

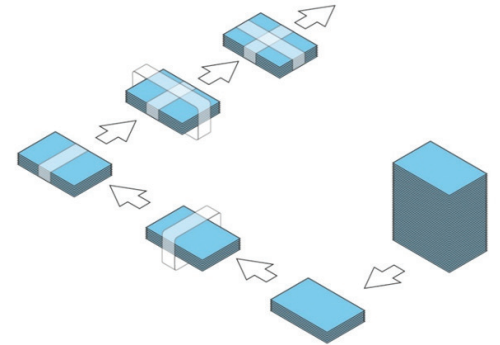

ABS Series 1

Based on cartons and banding into groups. Two banders featuring paper or BOPP.

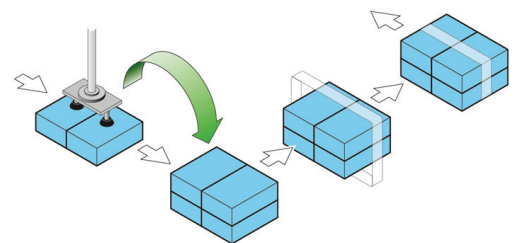

ABS Series 2

Preferred for the paper, print and card industry, featuring a feeder and two banding heads for cross banding in paper or BOPP.

ABS Series 3

Incorporates a pick and place vacuum head for various product types, cartons, bags etc. creating single or multi-layer bundles.
